U.S. Patent and Trademark Office

Application/Control Number: 10/083,400

Art Unit: 1732

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1 and 2 are rejected under 35 U.S.C. 103(a) as being unpatentable over either of Nomura (see Fig. 1) or Japanese Patent 5-97447 (see Fig. 5).

Either applied reference discloses the basic claimed process of forming a lens by placing a spherical optical preform within a lens mold comprising upper and lower molds constrained by a trunk mold and compressing the perform into a desired lens shape which is non-spherical, the references essentially lacking a clear showing that the perform has an outside diameter 95-100 percent of the outside diameter of the upper and lower molds. Note that Figure 5 of Japanese –447 shows the preform to be nearly the diameter of the upper and lower molds, while Nomura shows the preform to be maybe 50% of the diameter of the molds. However, it is submitted that the exact diameter of the perform with respect to the diameter of the molds used to compress the perform would have been an obvious modification dependent on how much pressure is used and heat applied to the preform to perform the compression. One of ordinary skill in this art would have recognized that the exact diameter of the preform constitutes a result effective variable which would have been obvious dependent on the amount of plastic flow desired during the compression.

2.Applicant's arguments with respect to the claims have been considered but are moot in view of the new ground(s) of rejection.

Application/Control Number: 10/083,400

Art Unit: 1732

In view of applicant's amendment and the well known statement made in the first office action concerning spherical performs, the rejection has been modified. However, it is respectfully submitted that the instant claims are simply not allowable based on what is commonly done in the optical art. It is well known to compress spherical preforms to make lenses using the instant molding apparatus and making the preform to have a diameter almost equal to that of the upper and lower mold would have been an obvious consideration dependent on amount of plastic flow of the preform material desired during the compression.

3. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, THIS ACTION IS MADE FINAL. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Application/Control Number: 10/083,400

4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Mathieu D. Vargot whose telephone number is 571 272-1211. The examiner can normally be reached on Mon-Fri from 9 to 6.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Michael Colaianni, can be reached on 571 272-1196. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
